

Make training and sales pitches more powerful and memorable

Interact Hospitality demo and training toolkit for guest rooms

Interact Hospitality delivers real-time operational transparency across your entire property. To help you understand everything the system offers, we've developed a portable demo kit for guest rooms. So you can explain and showcase its benefits and capabilities to your customers and your team.

You can use the kit to:

- Understand and demonstrate how the features of Interact Hospitality for guest rooms work.
- Combine the hotel dashboard with the demo case study.
- Showcase a typical guest room layout with indicators representing light points, AC, fan and motorized curtains.
- Showcase the room's user interfaces and occupancy sensors, as well as switches simulating the integration into the Interact Hospitality dashboard.

What's in the demo kit?

The portable demo kit contains two parts: The top lid shows a typical guest room layout with indicators representing light points, AC, fan and motorized curtains. The bottom lid includes the room's user interfaces and occupancy sensors, as well as switches simulating how it integrates with some other systems and devices. With a dashboard license you can also see the impact of the requested services and room status in the real time Interact Hospitality dashboard.

How to order

To order the kit, please contact your local Partner Manager.
